## What makes **Back on Track**® unique?

**Back on Track**® has a product range that works with infrared heat reflection technology. Through scientific medical knowledge developed using advanced textile production methods, we have created a ceramic infused wellness textile called **Welltex**®. The **Welltex**® fabric contains ceramic particles that have the ability to reflect body heat in the form of infrared heat radiation. Infrared radiation is a known energy form used to increase well-being and generates a favourable effect for muscles and joints. The reflected heat helps to reduce muscle tension, supporting blood circulation which can aid the recovery process from injury and strain.

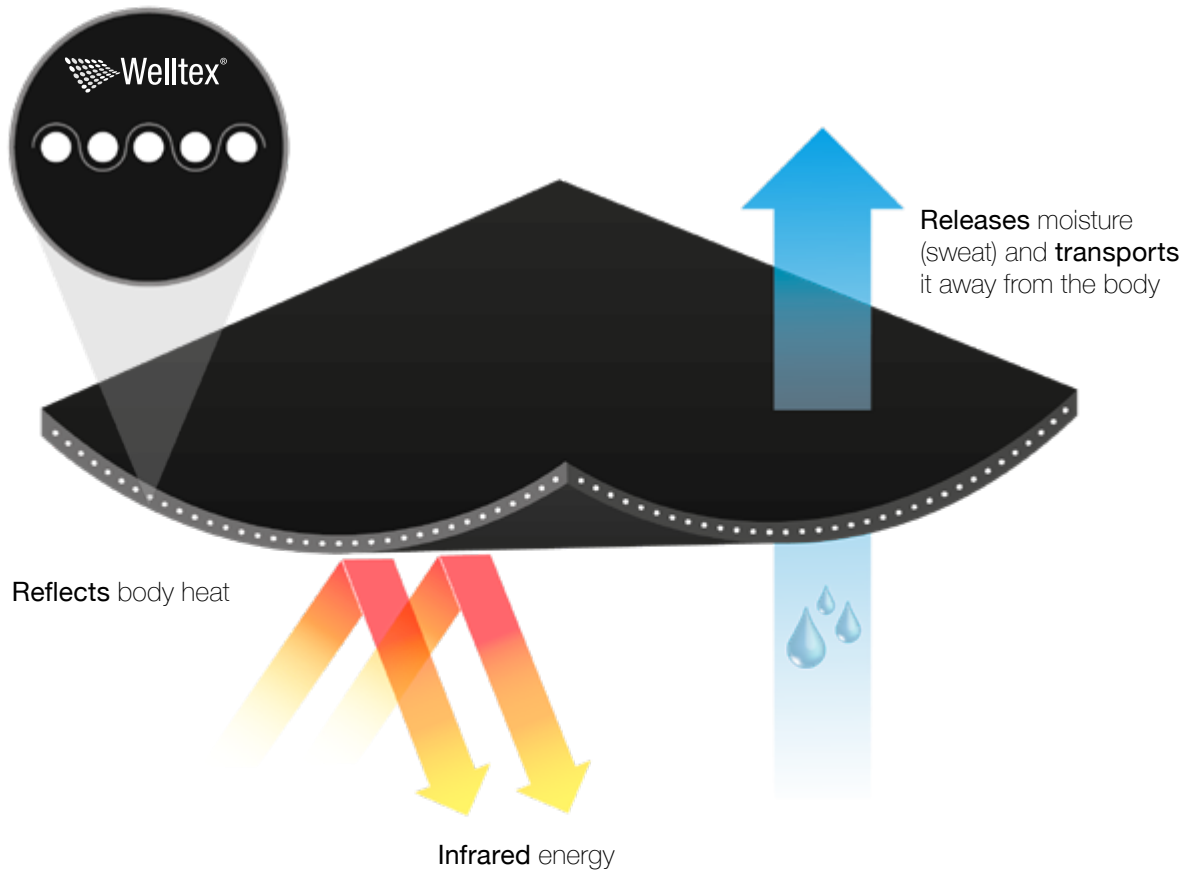

The use of **Back on Track**® products should be built up gradually. For the first two or three days the product may be used up to four hours (preliminary phase). After this, the usage time should be increased to at least eight hours or longer.

- » It is not recommended to use **Back on Track**® products simultaneously with ointments/liniments.
- » It is not recommended to use **Back on Track**® products during pregnancy.
- » When used in combination with therapy, always consult first with your physician or veterinarian.

**Back on Track**® products work naturally in generating their own heat, therefore the products are at no risk of being identified as doping. No external heat has been added. The result is consistent, soothing warmth exclusively created by reflecting heat from the body.

The products can be machine washed at 30°C with a mild detergent.  
Important: Do NOT use fabric softener or bleach.  
Do not tumble dry or iron above 50°C.

The products do not have any side effects, however in the first few days, a strong effect may occur. The best course of action is to remove the product and in the following days gradually increase the time of usage again.

Take a closer look.

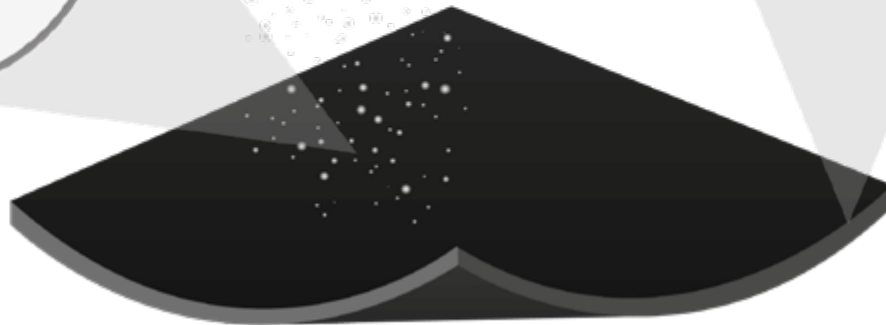

The **ceramic particles** are **infused** directly into the **thread** of the fabric.

Ceramic particles

How it's **manufactured**.

The polyester- or polypropylene fabric is **infused** with **ceramic particles**. The infusion works through a **melting process** with high temperatures.

## EQ3 Riding Helmet

Smooth Shell

- » Equipped with **MIPS** Brain Protection System
- » Safety standard **CE VG1 101.040 2014-12** certified
